

HOW TO CARE FOR YOUR NATURAL HAIR WIG

*Your natural wig requires special care if you want to keep its hair shiny and flexible as long as possible. We recommend **AZURA Hair Care products**, as their formula is specifically designed for natural hair wigs.*

INSTRUCTIONS

1. Discuss hair styling techniques and precautions with your hair stylist. Never brush wig while cap is still wet, as nodes are more fragile. It is also recommended to dry off the base with a hair dryer before styling.
2. Work some **AZURA Moisturizing Shampoo** to a lather in the palm of your hand, then gently press in with your palms, starting at the crown and working your way to the front. Do not massage hair with fingertips. If washing wig in the shower, make sure to use your palms, not your fingers.
3. Delicately rinse off shampoo in gently running lukewarm tap water. Do not apply too much pressure on the nodes at the base; this could cause premature hair loss.
4. Apply **AZURA Moisturizing Conditioner**, then rinse off. If hair is devitalized and dry, you can add **AZURA Intense Treatment** to **AZURA Moisturizing Conditioner** for a deeper treatment. These two products have a synergetic action that helps restore hair shine.
5. To dry off hair, press hair with a towel to remove excess water. Do not scrub hair.
6. If hair tips become dry or tangled, vaporize **AZURA Leave-In Conditioner**. Do not rinse.
7. Now you can style your hair. Always use a large-tooth comb or a sculpting brush. Ask your hair care centre about the special hair care products you may need.

Washing your wig or hair prosthesis daily and/or scrubbing vigorously will cause premature hair loss and affect the longevity of your unit.

Take good care of your wig!
