

## HOW TO CARE FOR YOUR SYNTHETIC WIG

Your synthetic wig requires special care if you want to keep it beautiful as long as possible. We recommend **Azura Wig Care Products** as their formula is specifically designed for synthetic fibres.

### INSTRUCTIONS

1. Before cleaning your wig or smoothing out kinks, delicately brush the wig with a brush designed for synthetic fibers.
2. In a basin filled with cold water, add 1 to 2 teaspoons of **Azura Clarifying Shampoo** for synthetic fibres, then fully immerse your wig. Be careful: using hot or warm water could alter your wig.
3. Gently shake wig, but do not lather too much. Do not scrub. Let your wig soak in the basin for at least 30 minutes.
4. Replace soapy water in the basin with clean cold water and immerse wig until shampoo is completely rinsed out.
5. Place wig in a towel and gently press out excess water. Do not scrub. Place wig on a wig stand.
6. Vaporize **Azura Conditioning Mist** over towel dried synthetic fibres, keeping the bottle 10 to 12 inches away from the wig. Do not rinse.
7. Let wig dry on a wig stand. Note: Styrofoam heads can stretch out your wig, they are not recommended. The only drying method recommended is air-drying, and it should take about 2 hours depending on hair length and density.
8. The style of your wig will return once the wig has dried. You can shake your wig to give it more volume, run your fingers through it and gently untangle it. **Do not untangle before wig is completely dry. Do not use a hair dryer, curling iron or any device that radiates heat as it can dry, burn or damage the synthetic fibre.**
9. Vaporizing hair spray or using gel may damage synthetic fibres. Use only hairstyling products designed specifically for synthetic wigs.

Take good care of your wig!
